

① Decompose each number into tens and ones

Separating values makes mental math simple

- $11 = 10 + 1$
- $51 = 50 + 1$
- $101 = 100 + 1$

② Group and add all the tens together

Combine the multiples of 10:

$$10 + 50 + 100 = 160$$

③ Group and add all the remaining ones

Combine the ones:

$$1 + 1 + 1 = 3$$

④ Add the totals together

Combine the sum of the tens with the sum of the ones:

$$160 + 3 = 163$$
